

GYMPIE VET SERVICES

Introducing Gympie Veterinary Services Equine Annual Health Service. Treating diseases when they occur can be difficult and often expensive. That is why your horse needs a preventative care program to keep your horse healthy and happy. We are committed to your horse's health so we have introduced the discounted Equine Annual Health Package (EAHP). Our Equine Annual Health Package ensures your horse's routine vaccinations, worming; including faecal egg count monitoring and dental care is up-to-date.

Dental Examination

Dental disease is important to diagnose and manage in horses. Sharp enamel points and dental disease can lead to weight loss, diarrhoea, pain when eating, behaviour issues, poor performance, colic and more. A yearly dental check is recommended for all horses.

Tetanus

Tetanus is a fatal disease caused by a bacteria found in the soil. Horses are extremely sensitive to tetanus and vaccination is very effective.

Strangles

Strangles is a highly contagious upper respiratory tract infection that can be very serious and in some cases fatal. After the initial course of three shots, an annual vaccination with Equivac[®] 2in1 is recommended to prevent Tetanus and reduce the incidence of Strangles.

Hendra

Hendra virus is spread from flying foxes to horses and is fatal to horses. Hendra poses a human health risk because it can be transmitted from infected horses to humans. Every horse in our region is at risk of contracting Hendra virus and it is not a disease where travel is required to contract it. After the initial course of three injections, an annual vaccination with Equivac[®] HeV is recommended to prevent this deadly disease.

Worming

Equest[®] Plus Tape is the only wormer to control 'encysted' small strongyles in a single dose. Small strongyles are the most common equine intestinal parasite in Australia and affects horses of all ages. A mass emergence of encysted small strongyles has a 50% case fatality rate. This is why Gympie Veterinary Services recommend all horses be treated with Equest[®] Plus Tap at least twice per year. Faecal Egg Counts will be performed as part of our EAHP to monitor how frequent your horse needs worming.
